Hose

The sensible alternative to silicone coolant hose…

Blue Stripe Coolant Hose
beats silicone's price and performance

Blue Stripe hose is made with EPDM (Ethylene Propylene Diene terpolymer) — a compound known for excellent sealability and low water permeation. Unlike its predecessors in the '60s and '70s, this hose resists "electrochemical degradation" (ECD), the primary cause of most early coolant hose failures. This discovery also led to the realization that silicone lasts so long because of its resistance to ECD not high temperatures.

Blue Stripe coolant hose beats silicone because it:

1. **Bonds better to fittings for greater sealability, fewer cold leaks and EPA concerns.**
2. **Reduces water permeation through hose wall, decreasing radiator topping and coolant concentration imbalances. Silicone permeates water 5 to 20 times faster than EPDM (depending on the operating temperature).**
3. **Is more robust than silicone — clamps are less likely to sink into and damage the hose.**
4. **Costs less and performs better than silicone.**

Blue Stripe Hose	Application	Meets Spec	Construction
4256SB	**Curved Radiator Hose** 3/8" to 3"	SAEj20R4 EC Class D-1 Temp. Range - 40°F to +302°F	Tube — ECR EPDM Reinforcement — Aramid Knit Cover — EPDM
4230SB	**Heater/Overflow** 3/8" to 1"	SAEj20R3 EC Class D-1 Temp. Range - 40°F to +302°F	Tube — ECR EPDM Reinforcement — Aramid Spiral Cover — EPDM
4175SC	**Heavy Duty Radiator** 1 1/4" to 3"	SAEj20R1 EC Class D-1 Temp. Range - 40°F to +302°F	Tube — ECR EPDM Reinforcement — Nylon Cord Cover — EPDM

Blue Stripe Molded Coolant Hose

Recommended For: Upper, lower, by-pass, heater and other coolant applications. Factory molded to fit specific applications. Installs without buckling, bending out of shape, or straining at connections. Compounded to resist electrochemical degradation - the leading cause of hose failure. Available in 3/8" thru 3" inside diameters. Meets OEM specifications. Meets SAE 20R4 and 20R3 Type EC Class D-1 requirements.

Tube: ECR EPDM resists electrochemical degradation.
Reinforcement: Aramid knit for long life.
Cover: Smooth EPDM heat-resistant cover.
Temperature Range: -40°F to +302°F.
Ends: Plain and expanded.

4256SB

Blue Stripe Straight Coolant Hose

Recommended For: Demanding, heavy-duty coolant and air applications. Available in 1¼″ thru 3″ inside diameters. Exceeds SAE J20R1 Type EC Class D-1 requirements.

Tube: ECR EPDM tube resists "cold water leaks" and remains soft and pliable.

Reinforcement: Two-ply bias fabric construction maximizes flexibility and strength.

Cover: EPDM

Temperature Range: -40°F to +302°F.

Blue Stripe Heater Hose

Recommended For: Coolant, water and air applications. Has all the features of Blue Stripe molded coolant hose. Available in 3/8″ thru 1″ inside diameters. Compounded to resist electrochemical degradation. Similar to or meets SAE J20R3 Type EC Class D-2 requirements.

Tube: ECR EPDM tube withstands high under-hood and coolant temperatures.

Reinforcement: Two-ply aramid construction provides extra strength.

Cover: EPDM provides extended service without cracking or hardening.

Temperature Range: -40°F to +302°F.

Ends: Plain.

Packaging: 50′ lengths.

PowerGrip® SB Clamps

Maintenance-free clamps retain dynamic tension, never need retightening. Stops leaks even on out-of-round applications. Environmentally friendly, eliminates coolant leaks and ground water contamination.

- Easy to install with ordinary heat gun. No scraped hands.
- Wide sealing area entraps connector bead.
- Made of heat sensitive thermoplastic with a memory to prevent over- or under-tightening.
- Available in 15 sizes to fit hose outside diameters 1¼″ thru 3⅛″.
- Packaging 10 to carton.

Size	Part No.	NominalHose I.D. (In.)	Fits Hose O.D. (in.)
SB15	GT32915	¼	½ to 1⁹⁄₁₆

Hose Introduction

Straight Engine Coolant Hoses

This hose type is used in engine cooling systems as a flexible connector between the engine and radiator and may have either textile or textile-helical wire reinforcement. An upper radiator hose usually operates under pressure only, while the lower radiator hose performs under vacuum and pressure. Hoses subjected to vacuum generally require wire reinforcement. These hoses are fabric reinforced.

(SAE 20R1) — Heavy duty type for service in heavy duty application. This type is available in two wall thicknesses.

(SAE 20R2) — Flexible heavy duty wire embedded type for the same service as SAE 20R1.

(SAE 20R3) — Heater hose for normal service.

(SAE 20R4) — Radiator hose for normal service. (Usually molded.)

(SAE 20R5) — Convoluted wire supported type for normal service.

Tube and Cover Stocks Available

Standard coolant hoses meet the requirements of the SAE J20 hose series. The range of tube and cover stocks available and ovenaging requirements are:

Class A — High temperature resistance; 70 hours @ +347° F.

Class D-1 — Low oil resistance, low compression set; 70 @ hours +257° F.
Class D-2 — Low oil resistance, medium compression set; 70 hours @ +257° F.

Standard Wrapped Reinforcement Nonwire Reinforced

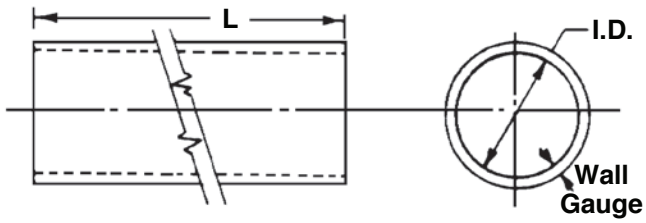
Specifications are given in this section for these straight nonwire reinforced hoses:

4169A 4171 4175SC 4176Y
4169G 4175EC 4176HD

NOTE: The applicable SAE specification is shown at the top of each of the following tables. Hose sizes are designated by I.D. and wall gauge. A reference O.D. is shown In the tables as a help in selecting clamps and should not be used when checking or inspecting hose. (SAE specifications show wall gauge and not O.D.)-

*SAE 20R1 Standard Wall . . . . . 0.17" - 0.22"
Heavy Wall . . . . . 0.23" - 0.28"

Tolerances for above hoses are:



Tolerances

Size	I.D. (In.)	Wall Gauge (In.)	
		Standard Wall	Heavy Wall
Through 1¾"	±.03	.17/.22	.23/.28
2" or more	±.03	.17/.22	.23/.28
Straight Length (In.) 0 through 12"		L (In.) +.38, -.12	
over 12"		+3%, -1%	

NOTE: See SAE Handbook for additonal details of the SAE J20 hose series and SAE J200 materials

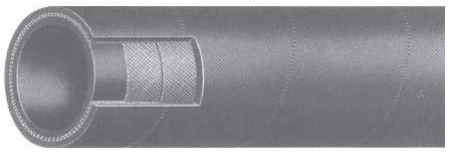
Hose Troubleshooting Guide

Physical Appearance	Cause of Failure	Corrective Action
Hardened, cracked hose cover.	Excessive temperature.	Shield or route away from external heat sources. Improve air circulation. Replace with more heat resistant hose.
Cracks in cover without hardening.	Electro Chemical Degradation.	Replace with ECR Coolant Hoses.
Swelling at end(s) without softening of hose.	Electro Chemical Degradation.	Replace with ECR Coolant Hoses.
Swelling with softening ("tender" or "gooey") of the hose.	Excessive oil externally or in coolant system.	External — eliminate source of oil. Internal — replace coolant using recommended types and quantity of additives. If vehicle has automatic transmission, check for leakage of oil from oil cooler into the engine cooling system. If cannot correct, replace with oil resistant hose.
Scuffed, gouged or abraded cover.	Interference with engine or cooling component.	Reroute, support or shield. Avoid high heat sources.
Failure at clamp.	(1) Cover cracks — caused by clamp overtightening. (2) Tube cut radially due to improperly positioned clamp (over bead on the fitting).	Replace hose and properly reclamp. Replace hose and properly reclamp.
Leakage at (clamp) fitting.	Improper clamp torque.	Retighten clamp. (NOTE: Clamps should be inspected and retightened periodically.)
Distorted clamp.	Overtightening, misalignment or defective clamp.	Replace clamp.
Burst hose.	Electro Chemical Degradation.	Replace with ECR Coolant Hoses.
Collapsed hose.	Misapplied hose.	Use hose of proper configuration and/or with internal spring.
Bulge or bubble between cover and tube.	Defective hose. Excessive oil externally or within coolant system.	Replace hose. External — eliminate source of oil. Internal — replace coolant using recommended types and quantity of additives. If vehicle has automatic transmission, check for leakage of oil from oil cooler into engine cooling system. If cannot correct, change to oil resistant hose.

Straight Engine Coolant Hose — Nonwire

Recommended For: Heavy duty engine cooling service in truck, bus and off-highway vehicles. Superior resistance to heat and ozone and low resistance to oil. Handles various coolant solutions. Meets SAE 20R1, Class D-2 tube and cover, standard wall specifications.

4175EC



Tube: EPDM. Black. Heat resistant.
Reinforcement: Multiple plies of synthetic fabric
Cover: EPDM. Black. Heat, weather and ozone resistant. Low oil resistance.
Temperature Range: -40° F to +257° F (-40° C to +125° C).
Ends: Plain.
Packaging: 3' lengths.

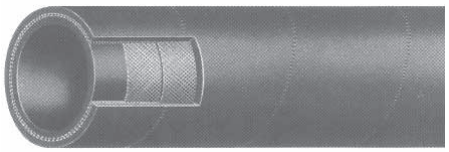
Straight Engine Coolant Hose — Nonwire

Recommended For: Heavy duty service on truck and passenger vehicles. Handles various coolant fluids and is excellent for oily conditions. Meets SAE 20R1, Class B tube, Class C cover, standard wall specifications.

4169A



Tube: Nitrile. Black. Oil resistant.
Reinforcement: Multiple plies of synthetic fabric.
Cover: Neoprene. Black. Oil, heat and weather resistant.
Temperature Range: -40° F to +212° F (-40° C to +100° C)
Ends: Plain.
Packaging: 3' lengths.

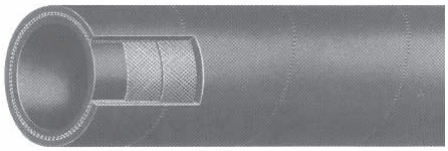
Straight Engine Coolant Hose — Nonwire

Recommended For: Heavy duty engine coolant applications requiring excellent heat resistance and an oil resistant cover. Long service life and exceeds SAE 20R1, Class D-1 tube, Class C cover, standard wall specifications.

4169G



Tube: EPDM. Black. Heat resistant.
Reinforcement: Multiple plies of synthetic fabric
Cover: Black. Heat, ozone, oil and weather resistant.
Temperature Range: -40° F to +275° F (-40° C to +135° C).
Ends: Plain
Packaging: 3' lengths.

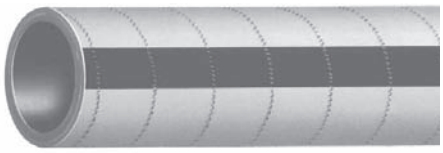
Silicone Engine Coolant Hose — Nonwire

Recommended For: Heavy duty engine coolant service to withstand high and low temperatures and very good compression set properties. Meets SAE 20R1, Class A tube and cover, standard wall specifications. Extremely flexible and lightweight. Moderate oil resistance.

4171 (Silicone)



Tube: Silicone. Orange. Excellent heat resistance.
Reinforcement: Multiple plies of synthetic fabric. (Polyester).
Cover: Silicone. Green. Excellent heat, ozone and weather resistance.
Temperature Range: -65° F to +347° F (-54° C to +175° C).
Ends: Plain.
Packaging: 10' lengths.

Standard Heater Hose

Recommended For: Use as a flexible connector between the passenger compartment heater and engine hot coolant connections. Low oil resistance. Improved heat and weather resistance and meets SAE 20R3, Class D-2 tube and cover specifications.

Tube: EPDM. Black. Excellent heat resistance.
Reinforcement: Synthetic fiber.
Cover: EPDM. Black. Excellent heat, ozone and weather resistance. Limited oil resistance.
Temperature Range: -40° F to +257° F (-40° C to +125° C).
Packaging: 50' lengths.

Silicone Heater Hose

Recommended For: Heater applications where extreme temperatures are present and longer than normal service life is required. Excellent flexibility. Meets SAE 20R3, Class A tube and cover specifications. Hose also meets SAE 20R3HT Class A tube and cover specifications.

Tube: Silicone. Orange. Excellent heat resistance.
Reinforcement: One ply of aramid fiber.
Cover: Silicone. Green. Excellent resistance to heat, ozone and weather.
Temperature Range: -70° F to +400° F (-21° C to +204° C).
Packaging: 50' lengths.

Flexible Engine Coolant Hose — Wire Reinforced

Recommended For: Engine cooling applications requiring very flexible hose with a wire reinforcement. Similar to SAE 20R5, Class D-2 tube and cover, standard wall specifications. A spring is inserted into the hose bore to reduce kinking and collapsing. In many applications, this hose can be substituted for molded curved hose.

Tube: EPDM. Black. Heat resistant.
Reinforcement: One ply of synthetic fabric with built-in helical wire.
Cover: Black. Reinforcing fabric impregnated with Neoprene. Heat, weather and oil resistant.
Temperature Range: -40° F to +212° F (-40° C to +100° C).
Ends: Straight cuffs (no wire).

*Hose will accept these bend radii, however, suggest trial fit to determine suatibility of this heavy duty hose for the application.

Fuel and Oil Hose

Recommended For: Flexible connections at various locations in metal fuel lines. Exceeds requirements of SAE 30R6 and SAE 30R7 specifications for fuel line hoses. Materials used in the manufacture of this hose will not discolor fuels or contaminate fuel systems. Also used for crankcase ventilation.

Tube: Nitrile. Black. Oil, gasoline and gasohol resistant.
Reinforcement: Single ply of synthetic fiber.
Cover: Black. Fuel, oil, ozone and high temperature resistant.
Temperature Range: -40° F to +257° F (-40° C to +125° C).
Packaging: 25' lengths.

Air Brake Hose

Several types of SAE air brake hoses are recommended for use as flexible connectors in automotive air brake systems. The system includes all air-actuated equipment leading from the air brake line. NOTE: Do not use these hoses from the air compressor to the air reservoir if the air temperature is above +200° F (+93° C). Permanent type or reusable couplings are used with these hoses.

All air brake hoses intended for use on vehicles traveling over public roads or highways are regulated by the Department of Transportation (DOT). The National Traffic Safety Authority has issued a set of safety standards known as the Federal Motor Vehicle Safety Standard No. 106 (MVSS 106). It establishes performance levels for air brake hoses. Each hose installed on an over-the-highway vehicle must have a special label certifying compliance with MVSS 106. Air brake hoses must meet DOT safety standards.

Recommended For: Use as a flexible connector in vehicle air brake systems. Meets SAE J1402, TABLE A and FMVSS 106-74 requirements.

Tube: EPDM. Black.
Reinforcement: Four spiral synthetic yarn.
Cover: EPDM. Black. Weather resistant.
Temperature Range: -40° F to +200° F (-40° C to +93° C).
Packaging: 50' lengths.

Windshield Wiper Hose

Recommended For: Use in control and operation of automotive wiper systems. This flexible, reinforced hose can be bent in any position without collapsing while operating under nearly full engine manifold vacuum. It will not split or crack when forced over a nipple. Also used in windshield washer systems. Meets SAE J50a specifications.

Tube: EPDM. Black. Heat and ozone resistant.
Reinforcement: Single ply of synthetic fabric.
Cover: EPDM. Black. Heat, ozone and weather resistant.
Temperature Range: -40° F to +212° F (-40° C to +100° C).
Packaging: 50' lengths.

Hose Clamping

Clamping hose to fittings is an art. Many things affect how well a connection will maintain integrity and prevent leaking. With proper selection of clamps, fittings and torquing technique, a quality connection can be achieved. With proper maintenance of the connection, leaking will never be a problem.

Things That Minimize Leaking

1. **Torque Level of the Clamp**

   A. Normally, the higher the torque level reached without damaging the clamp, hose or the fittings, the less chance of leaks.

   B. A clamp that evenly distributes torque normally attains higher torque without damaging connection. Any localized forces will damage connection at lower torque levels.

   C. Rate of torquing influences final torque after rest. A clamp torqued to maximum in 10 seconds will have 70% more rested torque than when torqued to maximum in 3 seconds.

   D. Retorquing clamp after 10 minutes will increase the final rested torque level.

   E. Torque level decreases as ambient temperature decreases.

   F. Torque level decreases with time due to compression set of the rubber. Periodic retorquing of clamps is advised.

2. **Conditions of Nipples**

   A. A beaded nipple offers better sealing and retention characteristics.

   B. The smoother the finish of the nipple, the less the tendency to leak under the clamp. Irregularities can channel fluid past the clamp. Avoid painting the nipples.

   C. Adhesion of hose to fittings will aid leak prevention. Brass and cast iron adhere to common rubber compounds after some time in service.

   D. Use of sealants and viscous gels will aid in leak prevention. Be sure the substance is compatible with the hose and coolant. Also the clamp/nipple configuration should prevent hose from slipping off the nipple.

Choosing a Hose Clamp

There is a variety of clamps on the market. In choosing a clamp, look for one which most evenly distributes the torque around the clamp, and maximizes torque level without damage to hose or fitting.

Types of Clamps

1. **Band Clamp —Tangential Screw.** This clamp (Figure 1) attains high torque levels and distributes torque evenly. Localized force beneath the housing can cause premature deformation of the nipple. Extrusion of rubber through the slots in the band may occur at high torque levels.

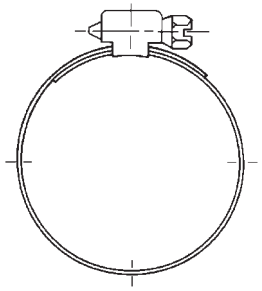

Figure 1

Hose Clamping – continued

2. **Banded Clamp—Radial Screw.** This clamp is best for low torque applications. Force is localized under the screw causing deformation of nipple at medium torque levels.

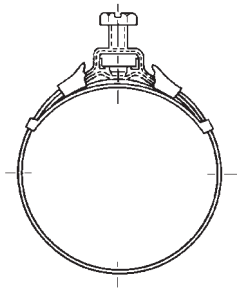

Figure 2

3. **Two-Wire Clamp.** This clamp (Figure 3) evenly distributes an extra high torque level. Will not damage hose unless the cover compounds are tender, such as silicone. Inexpensive.

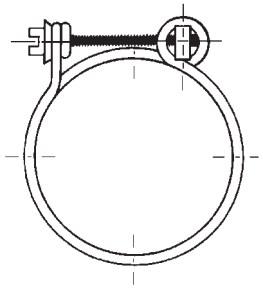

Figure 3

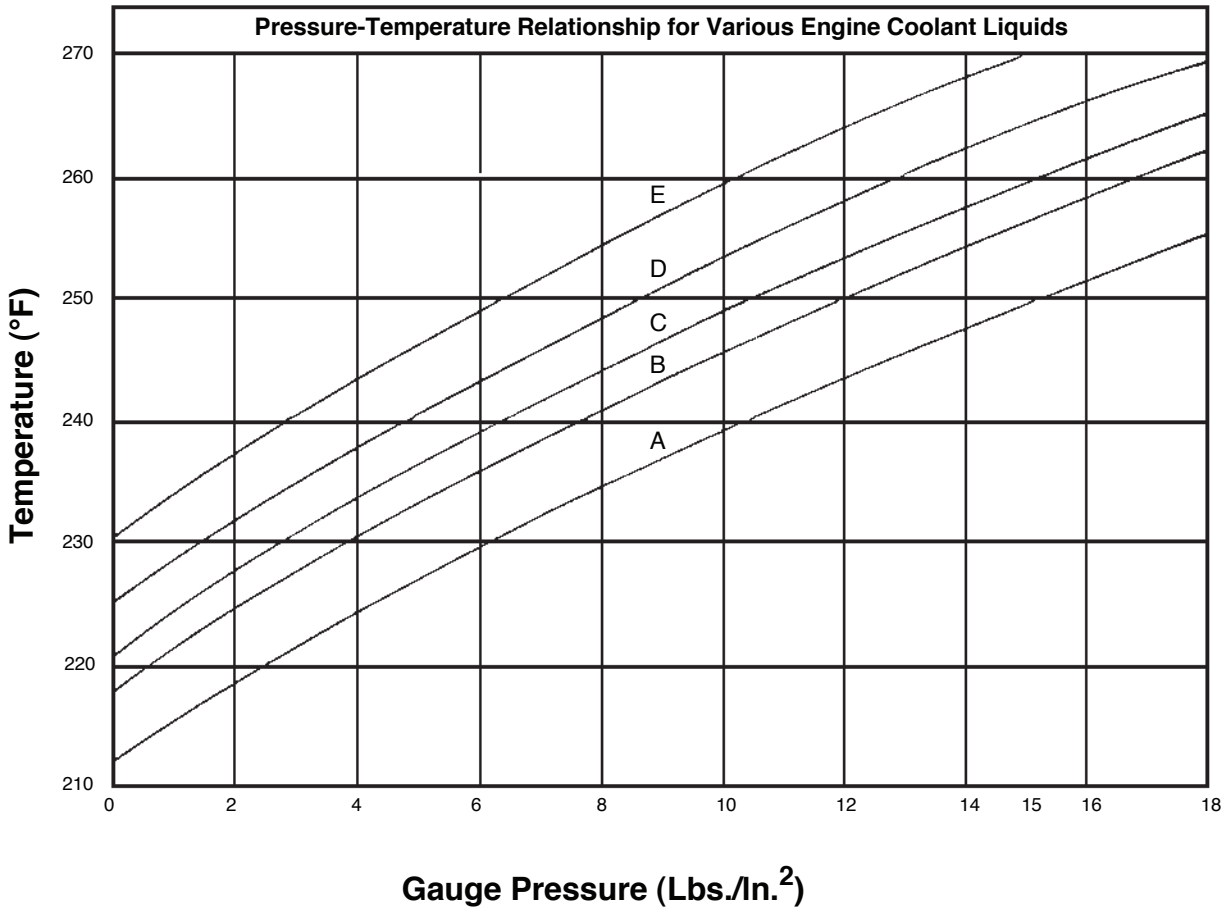
Pressure-Temperature Relationships for Various Ethylene Glycol-Water Mixtures

Pressure And Temperature Requirements —Chart below shows relationship between pressure and temperature for various concentrations of coolant fluids. Maximum temperature attained can be found by using pressure cap setting. Normal operating pressure and temperature usually will be less.

Pressure —In a closed cooling system, pressure is dependent upon temperature and type of coolant fluid. Usually, system is sealed with a pressure cap which opens at pre-set maximum allowable pressure. Temperature at which this occurs varies with concentration of coolant fluid. A cooling system in good condition will normally operate below this maximum pressure and temperature.



Line	Type of Coolant	Freezing Point
A	Water Only	+ 32.0° F
B	28.4% (By Volume) of Ethylene Glycol and Water	+ 6.3° F
C	37.8% (By Volume) of Ethylene Glycol and Water	- 7.8° F
D	47.8% (By Volume) of Ethylene Glycol and Water	- 29.2° F
E	58.0% (By Volume) of Ethylene Glycol and Water	- 55.8° F

Hose Glossary

Angle of Bend — In curved (formed) hose, the number of degrees of bend between body centerline and centerline of arm. In straight hose, curvature of a hose from a straight line listed in degrees per foot of length.

Arm — Portion of curved hose extending from end of hose to nearest centerline intersection.

ASTM — American Society for Testing and Materials.

Bend Radius (Curved Hose) — Radius of centerline arc of bend in hose.

Bend Radius (Straight Hose) — Minimum radius to which hose may be bent without overstressing components or causing cross section deformation and fluid flow restriction. Measured to inside of curvature.

Body — Middle section of hose, excluding any special ends built in.

Centerline Length — True length of hose, usually curved.

Compression Set — Degree to which elastomer will not return to original dimensions after having been compressed for period of time (as occurs when hose is clamped).

Cover — Outer, protective portion of hose.

DOT — Department of Transportation.

ECR — Electrochemical degradation.

Elastomer — Material that can be stretched and which will return to approximate original length after stress has been removed.

Enlarged End (E.E.) — One or both ends of hose may have I.D. larger than rest of hose—sometimes referred to as an expanded end.

FMVSS — Federal Motor Vehicle Safety Standards.

Inside Diameter (I.D.) — Hose size and inside diameter of hose body along its entire length unless it has enlarged ends.

ISO — International Organization for Standardization.

LPG — **Liquefied Petroleum Gas.**

Mandrel — Steel or rubber pole that provides internal support for hose during building and curing. Mandrels may be straight or curved.

NHTSA — National Highway Traffic Safety Authority— Agency of Federal Department of Transportation that issues safety standards for vehicles traveling on public roads or highways.

Oil Swell — Change in volume of rubber component resulting from contact with oil.

Outside Diameter (O.D.) — Diameter to outside walls of hose.

Overall Length — True length of straight piece of hose or hose assembly.

Plain End (P.E.) — Cutting hose to specified length (applies to braided and wrapped hose with or without wire reinforcing).

Rated Working Pressure — Highest internal pressure (psi) a hose is designed to handle in its intended service. Note: Does not allow for pressure surges that can be imposed by abnormal operation of system or misuse of hose.

Reference Outside Diameter (Ref. O.D.) —Nominal outside dimension shown for information only. Not an inspection parameter—no tolerances attached.

Reinforcement — Material placed over tube to resist pressure. Built-in wire or spring inserts used to resist vacuum.

RMA — Rubber Manufacturers' Association.

SAE — Society of Automotive Engineers.

Straight End (S.E.) — Available with wire reinforced handbuilt hose. Straight ends have all construction elements of hose except wire. Smooth cover at hose ends.

Tube — Inner (conveying) portion of hose.

Vacuum Rating — Maximum vacuum that may be applied to hose before it begins to collapse.

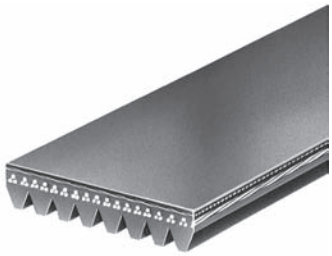
Wall Gauge —Thickness of material between inside of hose tube and cover.

Belts

Alliance

All-Makes Belts

“Drive-Flex” Micro-V® Belts



A standard in serpentine/V-ribbed belt technology! Supplied on popular OE truck applications, Drive-Flex offers the most *advanced and developed* belt constructionavailable in the heavy-duty market today. Sizes for many popular all-makes applications are now available. Identified with the “DF” suffix behind the part number.

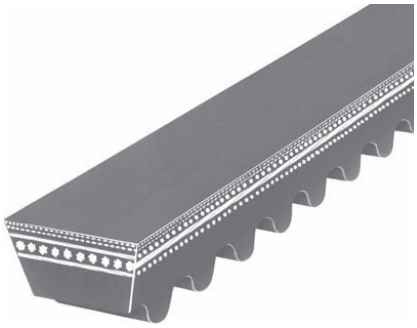
Features	Benefits
* OE-Equivalent *Construction and performance* at lower cost	* Lower cost/mile of operation
* New polymer that provides high heat resistance	* Offers 2-3X longer flex life on any all-makes applications
* Length-stable, high strength tensile members	* Consistent tension control over the life of the belt
* Manufactured on the latest automotive belt processes and tooling	* Precise dimensional control
* Sizes available to replace most recent and new accessory belt drive applications	* Available for your application
* An “engineered” match to the Alliance Parts Heavy Duty Belt Tensioner	* Not a will fit! Designed and optimized for today’s truck applications

®Registered Trademark of Gates Corporation.

Extended Life V-Belts

NEW in 2008

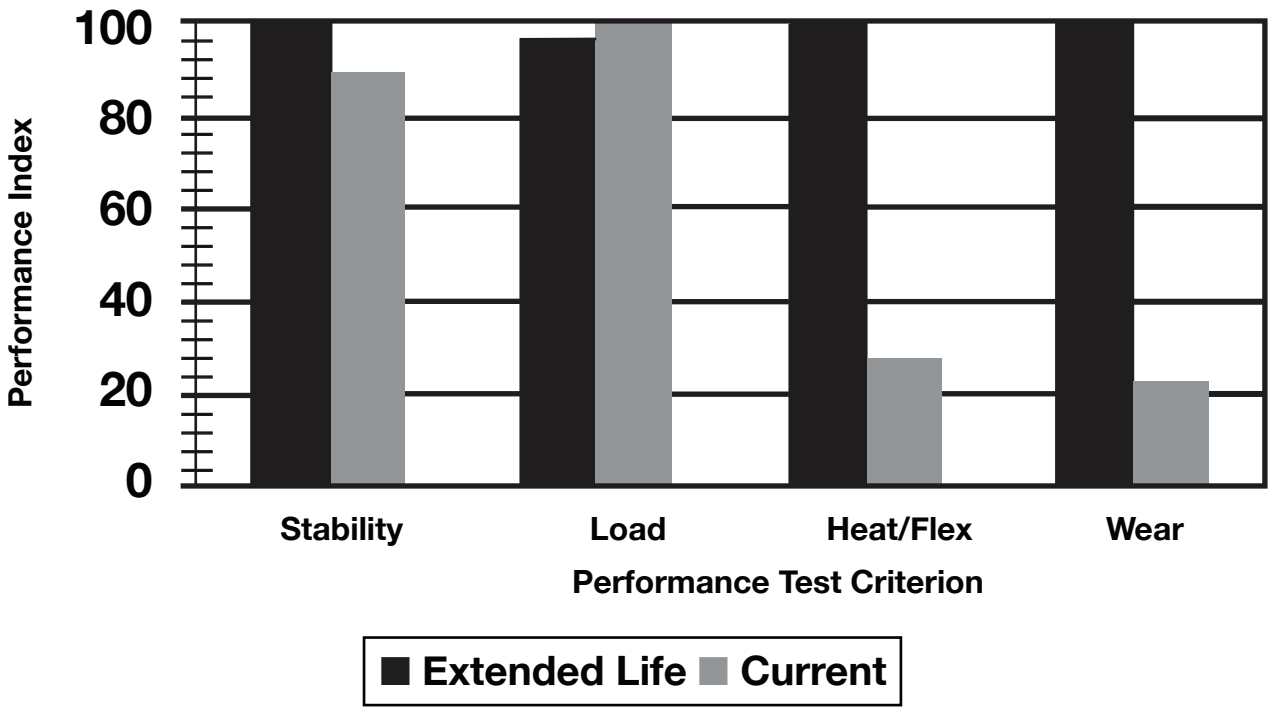
These premium quality V-belts are designed to provide extra-long service and to minimize operating cost per mile. New materials provide a new benchmark in life and wear performance. V-belts are available in several top widths and notched construction.



- Industry-First EPDM rubber compound.
- High tenacity tensile cords and special reinforcement provide excellent performance.
- Extended heat-resistant materials throughout.
- Precision V-forming process used on notched belts assures exact size and angle control.
- Notched belts are designed to resist cracking while providing tensile member support during operation.
- Notching allows for greater flexibility over small diameter pulleys and helps the belt run cool.
- Meet or exceed SAE J636C and SAE J637 specifications.

(GT15xxxE, 17xxxE, 22xxxE, 23xxxE, 28xxxE)

Extended Life vs. Current Belt Performance



All-Makes Belts — continued

Extended Life PowerBand® Belts

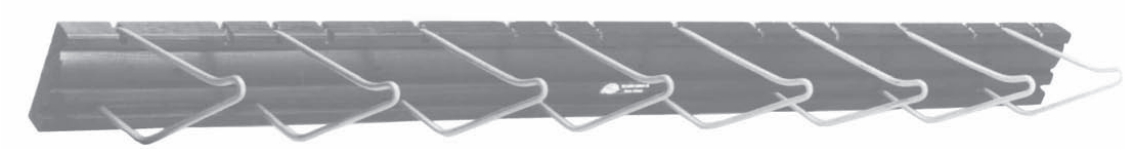
Designed for heavy-duty, heavy-load carrying drives. Powerbands are made up of two or more strands of V-belts banded together at the top with a tieband. The strands and the tie band are vulcanized together to form one homogenous belt, because of design, pulley dimensions are critical to the application. The tie band clears the top of the sheave so that each strand has full wedging in the groove.

- Overcomes tension fluctuations which can create excessive drive vibration.
- Eliminates the belt turnover caused by vibration and heavy shock load problems.
- Joined belts increase lateral rigidity many times and significantly reduce vibration.
- Oil and heat resistant construction.

(GT 2PBxxxxx E)

Wall Display Boards

Allow for the neat arrangement of belts and hose.



Available to Alliance Parts dealerswith a stock up order. Limit two boxes (each box contains approx. 30' of length). Please contact your inside sales representative for ordering information.

V-Belt Part Numbering Systems

When it comes to selling V-belts, there is really only one thing to keep in mind: there's no such thing as a universal belt part numbering system.

It's common practice for all belt manufacturers to assign part numbers that are descriptive of the belt's critical physical dimensions: the top width and circumference. The problem is that there are no industry standards in place to ensure consistency between the way one manufacturer measures a belt with that of another. As a result, the circumference measurement can represent any of three possibilities: the outside, the inside, or a measurement referred to as effective length. To compound the problem, circumference length and top width can be expressed in increments of varying fractions of an inch-tenths, sixteenths, thirty-seconds, etc. or even in metric scale.

What all this means is that you can never rely on matching belt part number to belt part number between manufacturers. Always check the physical dimensions to guarantee a like-fit.

To compensate for the lack of consistency across belt manufacturers, the competitive interchange contained in this booklet compares Gates, Dayco and Goodyear part numbers using **the outside circumference as the common denominator.**

Alliance Belt Numbering System
Alliance's "all makes" belt numbers are 5 digits in length. The first two digits denote the top width in 32nds of an inch. The last three digits indicate the outside circumference in inches with the last digit expressing 1/8 inch increments.

Example: **GT17 332**

- 1/8" increments of outside circumference = 1/4"
- Full inch increments of outside circumference = 33"
- Total Outside circumference = 33 1/4"
- Top width = 17/32"

Example: **GT15605**

- Outside circumference = 60 5/8"
- Top width = 15/32"

When using the competitive interchange, please remember that all belts have been compared based on top width and outside circumference. While each Alliance belt may not be identical in dimensions to a belt listed in the interchange, the Alliance number should be suitable for many applications of the competitive belt.

Also, keep in mind that due to varying pulley ride heights and available length adjustments inherent in certain applications, some belts will provide good performance across several applications.

All-Makes
Belt Tension Recommendations

(Supplied by Power Transmission Division of Gates Corporation)

Belt tension maintenance is critical to the operation of your accessory drives and the life of your belts. Please use the following procedure as guidance when tensioning your belts.

Procedure:

1) **Install new belt and tighten to recommended "new" belt installation tension.**

2) **Run drive for 10-15 minutes with fan and accessories ON (to build heat in the belts).**

3) **Turn off engine and re-measure tension.**

4) **Tension should be within the recommended *used* belt tension range.**

5) **If tension is below the used belt range, re-tension to within used belt range.**

6) **Always maintanance the lowest tension at which the belt won't slip. If it slips, retension the belt.**

IMPORTANT NOTE: *All new drive system tension requirements are specific to the drive. The recommendations below are "rule-of-thumb" (based on the tension carrying capacity of the All-Makes replacement belt).* ***Please consult your engine service manual for specific application requirements as component damage could result from over-tensioned belts.***

Belt# Series	**New Belt Tension/per belt**	**Used Belt Tension/per belt**
13000 ($13/32$" or $3/8$")	90-120 lbs	60-90 lbs
15000	105-140 lbs	70-100 lbs
17000 ($17/32$" or $1/2$" nom.)	120-150 lbs	80-120 lbs
22 and 24000	140-160 lbs	120-140 lbs
28000	140-160 lbs	120-140 lbs
Micro-V®	20-30 lbs (per rib)	15-20 lbs (per rib)
Powerband®	2 X single belt	2 X single belt

* Micro-V example for 8 rib belt; 8 X 30 lbs = 240 lbs max. for new belt.
** Powerband example; 2PB50 (a 17000 series belt strand); 2 X 160 lbs = 320 lbs max. for new belt; 2 X 120 lbs = 240 lbs max for used belt.

®Registered Trademark of Gates Corporation.

Worn Belt Identification and Replacement Tips

Remember, belts don't last forever. After 100,000 miles, they can go at any time. And with today's belts, you can't tell just by looking at them. So if your customer's truck has gone 100,000 miles between minor overhauls, save him some big trouble...recommend he replace the belt.

Furthermore, if a belt exhibits any of the following tell-tale signs regardless of its accumulated mileage, it is a candidate for replacement.

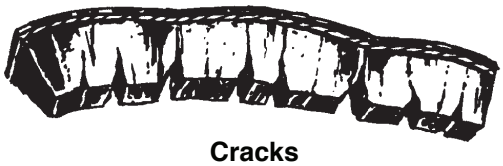
1. **Glazed or Shiny Sidewalls**

   The friction created by a loose belt slipping in the pulley causes the belt sidewalls to become slick and shiny. These glazed sidewalls lose their gripping strength; and the belt slips even more. Grease and oil on the pulley can also cause this condition.

Glazing

2. **Cracks**

   Deep bottom cracks that appear at regular intervals are caused by the belt turning around a too-small pulley (usually the alternator)-the undercord is being stressed to the breaking point. Smaller, irregular cracks, however, usually just indicate a belt that has weathered a long life.



Cracks

3. **Missing Chunks or Brittle, Separating Layers**

   A belt that is failing apart in layers could be a victim of oil. Oil and grease are a rubber compound's worst enemies. Oils weaken the compound's bonds making the belt soft, spongy and considerably weaker. Eventually, such a belt will slip. These oils can come from belt dressings (which should never be used) or from leaking engine parts.

Separation

4. **Jagged or Streaked Sidewalls**

   Pitted or streaked sidewalls are the result of a foreign object in the pulley (such as sand or gravel) or a rough pulley wall surface. Foreign objects can get into a pulley from an oily, sticky belt. Regular cleaning of drive components helps prevent this problem.

Streaked Sidewalls

Worn Belt Identification and Replacement Tips

5. **Tensile Break**

A large foreign object in the pulley can cut into the belt and break the tensile cords. A tensile break may occur, but go unnoticed, when a belt is forced or pried on during installation.

Tensile Break

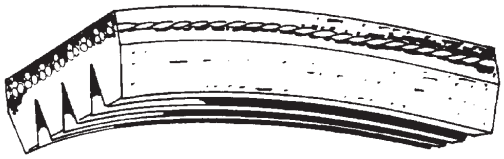
6. **Uneven Ribs (Micro-V® belts only)**

Pulleys must be clean at all times on a Micro-V drive. Foreign objects in the pulley can erode the undercord ribs and the belt can lose its pulling power.

Uneven Ribs

7. **Pilling**

Pilling occurs when rubber compound from the belt wears off and settles in the apex of the V-groove. This can cause uneven rideout, vibration and belt noise if the accumulation is severe.



Pilling

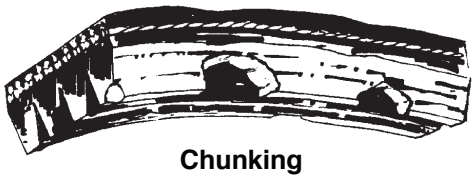
8. **Oil Soaked**

Grease, oil and other engine fluids on the belt sidewalls, or in the pulley grooves will glaze the belt and increase slippage. In some cases, petroleum contamination may deteriorate rubber and lead to premature failure.

Oil Soaked

9. **Chunking**

Deep cracks will lead to chunking where parts of the ribs will break off. Replace the belt immediately.



Chunking

®Registered Trademark of Gates Corporation.

Worn Belt Identification and Replacement Tips

When replacing belts, there are a few key points to keep in mind to assure the long service life an Alliance Parts belt can provide:

Pulley Alignment and Inspection

- Before removing the old belt, check the alignment of the pulleys. If the driveshafts are not parallel or if the pulleys are misaligned, the drive could be wearing the belt out before its time. If there is misalignment, you will have to adjust or replace the bent or broken pulleys, pulley brackets or shaft.

- When removing the belt, **do not** use any hand tools to pry the belt off the pulleys. Make sure to loosen the belt enough to remove with your hands.

- Once the old belt is removed, inspect the pulleys for worn grooves, foreign particles, rust or oil and grease in the grooves. If the pulleys cannot be cleaned or repaired, they should be replaced.

The New Belt

- Make sure the new belt you are putting on the drive is the correct size. This Alliance all makes belt booklet contains complete crossover information to identify the proper Alliance number for the vast majority of competitive manufacturers' numbers. Be sure the new belt has the proper top width and outside circumference dimensions.

- Matched belts must be replaced in sets. A new belt added to a set of old belts will not ride in the pulleys the same way the old ones do. As a result, the load of the drive will not be distributed evenly among all the belts. If one belt in a matched set fails, all the belts must be removed.

V-Belt and Micro-V ® Belt Drive Troubleshooting Guide

Problem—Belt wears beyond take up. Cannot be retensioned.

Possible Cause	Remedy
Wrong belt or belt worn out.	Check V-belt catalog for correct belt.

Problem—Belt wears unequally. (“Different driving” on matched set).

Misaligned drive.	Realign and retension drive.
Belt tensile member broken from improper installation.	Replace with new belt, properly installed.

Problem—Short belt life.

Tensile members damaged through improper installation.	Replace with new belt, properly installed.

Problem—Relatively rapid failure; no visible reason.

Worn pulley grooves.	Replace pulley.
Mismatched belts.	Replace with new matched set.

Problem—Rapid and uneven wear of sidewalls.

Misaligned drive.	Check drive alignment with straightedge.

Problem—Sidewall dry and hard. Bottom of belt cracked.

Slip-burn from too low tension, or worn pulley and groove.	Install new belt to correct tension. Inspect pulley groove for excess wear. Replace if worn.

Problem—Extreme cover wear.

Slip-burn or rough or worn pulley groove.	Install new belt to correct tension. Remove rough groove surface.

Problem—Spin-burns on belt.

Belts slip under starting or stalling load.	Tension belt until slipping stops.

Problem—Bottom of belt cracked.

Belt old and deteriorated.	Replace with new belt, properly installed.

Problem—Broken belts.

Belts forced on drive, tensile cords broken or damaged, wrong belt for drive.	Replace; check catalog for correct belt.

Problem—Unevenly worn sidewalls; bottom or top corner wear, broken edge cords. Inability to maintain tension.

Pulley misalignment.	Realign drive. Replace belt; check catalog for correct belt.

V-Belt and Micro-V ® Belt Drive Troubleshooting Guide

Problem—Belt turnover.

Possible Cause	Remedy
Excess belt vibration.	Belt too loose — retension.
Foreign material in grooves.	Remove material — clean pulleys.
Misaligned pulleys.	Realign the drive.
Worn pulley grooves (check with groove wear gauge).	Replace pulley.
Tensile member broken through improper installation.	Replace with new belt properly installed.

Problem—Belt noise.

Belt slip. High load on belt; drive out of take up.	Retension drive until it stops slipping.
Belt excessively glazed or worn.	Replace and tension as specified.
Non-uniform belt.	Replace belt.
Misaligned pulleys.	Align accessories (file brackets or use spacers as required).
Non-uniform groove or eccentric pulley.	Replace pulley.
Belts too loose (insufficient tension).	Adjust belt tension.
Belts not matched.	Install matching belts.

Problem—Hot bearings.

Belt is slipping.	Check for worn pulley grooves. Retension.

Problem—Pulley out too far on shaft.

Installation error or obstruction problem.	Place pulleys as close as possible to bearings. Remove any obstruction preventing this.

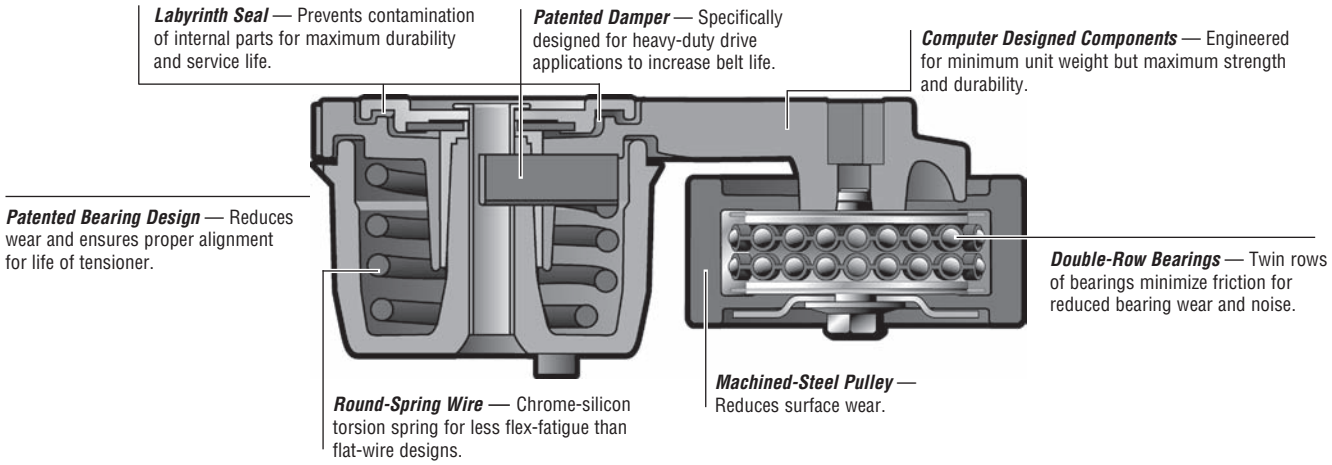
Tensioners

All Makes
Heavy-Duty Belt Tensioners

Alliance Heavy-Duty Belt Tensioners are designed to exacting OE standards and specifications for top performance on demanding diesel engine applications. In manufacturer testing, the Alliance Heavy-Duty Belt Tensioner lasted up to three times longer than other tensioners when tested under extreme peak-to-peak vibration tests.

Alliance tensioners offer unsurpassed damping for optimum belt tension and consistent drive alignment over the life of the drive. A unique, patented design is set at the factory to provide optimum tension in either direction depending on the application. To stand behind this commitment, Alliance belt tensioners come with a 1-year, unlimited mileage warranty.

Alliance tensioner design provides maximum coverage with minimal inventory.



All Makes
Heavy-Duty Belt Tensioners

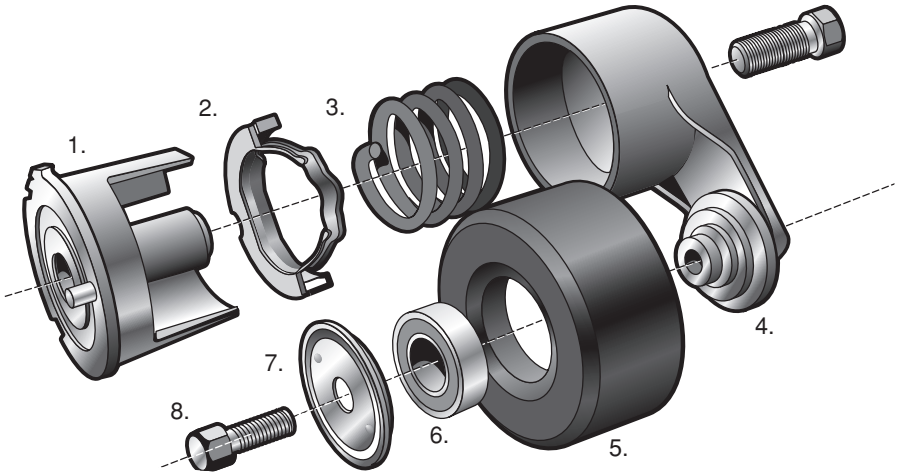
Tensioners are designed into the belt drive system for several reasons:

1) Proper tension is maintained throughout the life of the belt.
2) They reduce maintenance by eliminating the need to retighten belts on a periodic basis.
3) They improve belt life. Because the belt is always at the ideal tension, the belt lasts longer.
4) They reduce the amount of tension needed by the belt, thereby increasing bearing life of accessories.

How does a tensioner work?

The tensioner is a spring-loaded device consisting of eight basic parts:

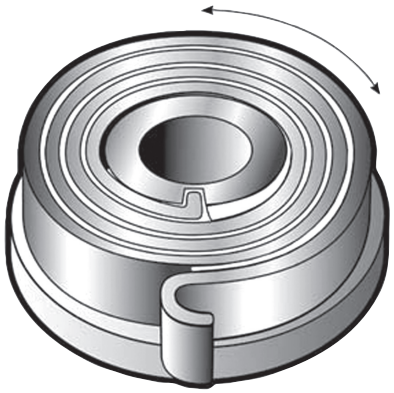
1. Base: stationary part of the tensioner that is bolted to the engine block or other accessories. Each base design is different. Some base components may be very complicated, including large sections of bracketry or seals that form part of the cooling system.
2. Bushing or Dampening Shoe: a plastic ring that dampens or smooths system vibration.
3. Spring: preloaded at the factory, it provides the force to tension the belt.
4. Arm: connects the spring to the tensioner pulley. It is usually an aluminum casing.
5. Pulleys: are nylon or steel and may be flat, grooved or flat with flanges. Pulley surfaces should be inspected regularly for damage or wear. Nylon pulleys are most vulnerable to wear.
6. Bearings: that lose lubrication can fail. Do not attempt to put a new bearing in an old pulley. Replacement pulleys with heavy-duty bearings are available.
7. Dust shield: protects the bearing from the elements.
8. Bolt: connects the pulley to the arm.



Note: Tensioners cannot be rebuilt since internal parts are not available. Never disassemble a tensioner unit. Injury may result.

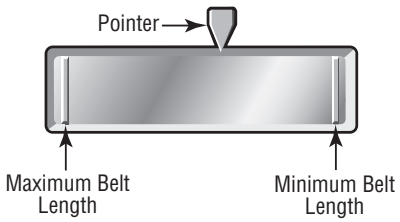
The Technical Truth About Belt Tensioners

Round Torsional Spring vs. Flat Spring Technology



Alliance – Round Torsional Spring	Competitor's Flat Spring
• Even rotational load. Offers resistance to compressive force.	• Uneven resistance through distributed concentric coil.
• Tighter dimensional tolerances for better output control.	• Less dimensional tolerance control. As a result, flat spring dimensions may vary significantly.
• Coil diameter tension remains constant across a wider range of motion.	• Tension varies because flat design operates within a narrower range rather than operating across all areas of the spring.
• Creates no heat build up. Less heat means longer tensioner life.	• Builds up heat from friction caused by greater surface contact of spring coils. Heat increases tensioner component wear and failure.
• Fewer stress points to weaken tensioner.	• More stress points along spring edges that can weaken tensioner, resulting in spring fatigue.
• Vibration and noise free. Space between coils keeps them from rubbing together.	• Close-wrapped coils vibrate and become noisy as a tensioner wears.
• Damping mechanism absorbs shock loads for stable operation. Damping remains constant throughout life of tensioners.	• Damping mechanisms are not included on most aftermarket flat spring tensioners. This means shorter belt life, more vibration noise, belt slip, and ultimately, more returns.
• Not affected by contaminants because of the spacing between the spring coils.	• Subject to failure due to contamination because dirt and grime lodge between coils. Particles become trapped, causing tensioner spring to seize.
• Damping mechanism is internal and protected from contaminants.	• Damping disks are external and subject to wear by contamination.

Tensioner Installation and Troubleshooting



A belt length variation gauge is built into each tensioner. The gauge indicates the belt's length. It consists of a pointer and either two or three marks indicating the range of tensioner movement. Minimum belt length, ideal length and full take-up length are usually indicated on the gauge. The gauge window is located on or along the break between the base and the arm of the tensioner.

As a belt wears and stretches with age, the tensioner automatically moves to keep belt tension constant. As this happens, the pointer on the length gauge will move toward maximum length. When the pointer is within 5 percent of the maximum belt length mark, the tensioner is out of its useful range and the belt should be replaced. The belt has stretched, often squeals and appears loose.

How long do tensioners last?

This varies on duty cycle, application and many other environmental conditions. Many early model tensioners and off road applications often show signs of failure before 100,000 miles. Newer, on-highway designs usually last longer.

Replacing tensioners:

Tensioners most frequently fail as result of careless belt replacement. If the old belt isn't removed carefully the tensioner may spring down and crack. If the new belt is too short it can snap the tensioner. Tensioners are designed for specific vehicles, which means there isn't a universal replacement procedure. Consult your vehicle's engine service manual for correct installation procedures.

How do tensioners fail?

1. Idler bearing failure, seized bearing.
2. Chipped idlers (plastic type).
3. Tensioner arm cracked.
4. Tensioner component wear.
   - Dirt/debris inside.
   - Bushing wear.
5. Belt misalignment.
   - Damping mechanism wear.
   - Bushing or internal component wear.
6. Increased tensioner movement.
   - Dampening device wear.

Alliance brand heavy-duty tensioners look AND fit like the originals.

Changeover Listing
Belt, Tensioner & Pulley Numbers

Showing Competitive Numbers With the Corresponding Alliance Part Numbers

The part numbers shown in the following listings were determined by comparing the applications and physical characteristics of the product. This is a guide for changing over stocks to our part numbers, and does not mean that the competitive number shown will fit all applications recommended for the part number. If a customer asks for a product to replace a product of another brand, do not use this list. Ask for the make, model, year and engine size on which it is to be used, and refer to the alphabetical listing to determine the proper replacement.
